

Real Life Maths

Children can find maths in everything around them, maths describes the real world.

Activity 1: Helping around the house during school closure

Setting the table.

Your child can learn a lot of maths when setting the table for dinner.

It is a good way to introduce numbers, counting, and symmetry. See if they can count out what they need and if they can match up the items?

Activity 2: Learning Emergency Contact Information

Does your child know their numbers? Teach them your mobile phone number as well as how to dial 999 or 112. Also see if they can memorise their street address or date of birth.

Activity 3: Loading the Dishwasher

You child will need spatial awareness to be able to load a dishwasher so everything fits and actually gets cleaned. If you don't have a dishwasher, show them how to fit the plates, cups in the press so everything fits in well.
